Feature Experience Overview

Dycom Industries is a leading U.S. specialty contractor that builds, engineers, locates, and maintains the telecommunications and digital infrastructure that carries the nation's broadband, wireless, and data-center traffic. Headquartered in Palm Beach Gardens, Florida, Dycom operates through a federated portfolio of approximately 38 independently branded operating companies (OpCos), with more than 20,000 employees and roughly 500 field offices nationwide. Revenue is driven by multi-year customer contracts, and the company's ability to convert contracted backlog into completed work depends directly on its ability to hire and field crews. The new digital experience is centered on two core entities: the **job opening (requisition)**, sourced from SAP SuccessFactors, and the **operating company**, which is the candidate's actual day-to-day employer and the brand customers recognize locally.

The primary goal of this experience is to **help candidates find, understand, and apply to the right Dycom opportunity — at the right operating company, near where they live — with confidence and minimal friction**, while giving customers, investors, and partners a credible, consistent view of Dycom's scale and capabilities. The program replatforms Dycom Industries, Inc. | The People Connecting America® onto SitecoreAI as the shared digital experience platform (DXP) foundation — design system, content model, component library, integration layer, analytics, and multi-brand governance — that every subsequent operating company site will inherit.

About Document

This document defines the experience strategy and functional requirements for the Dycom Industries DXP replatform. It is the baseline requirements set for Workstream 1 (Dycom In

dustries, Inc. | The People Connecting America® and the shared DXP foundation) and the reusable framework for Workstream 2 (the first four operating company sites). It aims to:

1. Communicate Icreon's understanding of Dycom's business processes, audiences, and pain points as gathered from the RFP, discovery workshops, stakeholder interviews, the current-state content audit, and the careers candidate-journey research.
2. Document the system requirements the platform, front end, and integrations must satisfy, written as testable "system should" statements.
3. Create the baseline requirements against which Dycom stakeholders agree which features are MVP, or POST MVP, and against which change requests are evaluated.

Intended Audience

1. **Development Team:** Needs precise, testable behavior for the SitecoreAI content model, Next.js front end, SuccessFactors job ingestion, and third-party integrations so components and APIs are built once and reused across 38+ operating company sites.
2. **Project Managers:** Need a clear view of scope, priorities, and dependencies (SuccessFactors, Notified, Paradox, consent tooling, Dycom IT) to plan sprints against the February 1, 2027 Dycom Industries, Inc. | The People Connecting America® launch and the May 30, 2027 operating company launches.
3. **Business Analysts:** Need a single traceable source of requirements and IDs to write user stories, acceptance criteria, and change-request impact assessments.
4. **QA Team:** Need unambiguous expected behaviors, including empty, error, mobile, and anonymous-versus-authenticated states, to build test scripts and the reusable QA scripts handed to Dycom for future site onboarding.
5. **Executive Management:** Need confidence that the experience directly supports recruiting throughput, brand consistency across the portfolio, investor credibility, and reduced legacy-platform risk.
6. **External Consultants or Vendors:** Need to understand exactly which data, events, and touchpoints their systems (SAP SuccessFactors, Paradox, Notified, Sitecore, analytics, and consent tooling) must provide or receive, and where the ownership boundary sits.

Business Context and Experience Goals

Dycom's core tension is **national scale versus local, brand-specific decisions**. Dycom is one public company with a single investor story, but candidates are hired by — and customers contract with — dozens of local operating companies, each with its own name, logo, territory, and pipeline. Today the candidate journey is a federated patchwork: a thin corporate careers section, an SAP-branded job portal, a sign-in wall on a different SAP domain, and dead legacy microsites still indexed by search engines. The new experience must make Dycom's scale a source of trust while keeping the local operating company visible, credited, and in control of its own content and candidates.

Primary business needs

- Fill hundreds of open, predominantly field and skilled-trade roles faster, because unfilled crews represent contracted backlog that cannot be worked.
- Present one brand-consistent front door from discovery through the application hand-off, eliminating the visual and domain discontinuity at the "Apply" click.
- Connect operating company identity and footprint to job search so candidates know who they would work for, and preserve the originating operating company's priority on candidates and leads.
- Establish a reusable DXP foundation (design system, components, content model, governance) so remaining operating companies can be onboarded from a playbook at a known cost and timeline.
- Enable marketing and communications teams to publish, govern, and experiment without IT involvement, with multi-stage approvals including Legal and Investor Relations.
- Communicate Dycom's growth story — including the Communications and Building Systems segments — to customers, investors, and candidates.
- Reduce security, patching, and licensing exposure from the legacy WordPress estate.

Experience goals

- **Find where I fit:** Help candidates who do not know Dycom's job titles or org structure discover a relevant career area, operating company, and opening in a few steps.
- **Search like a job seeker:** Search by role and location first, with plain-language categories rather than internal SAP department names.
- **Decide with confidence:** Present every job with a consistent set of facts, including pay, schedule, travel, physical requirements, benefits, and the operating company.
- **Apply from a phone:** Make the path from job detail to submitted application mobile-first, on-brand, and clearly explained.
- **Never hit a dead end:** Recover zero-result searches and expired jobs with adjacent roles, nearby operating companies, and Talent Network sign-up.
- **Trust at a glance:** Reinforce safety, scale, stability, and legitimacy (including recruitment-fraud guidance) on every key page.
- **Consistent everywhere:** Deliver the same quality of experience on Dycom Industries, Inc. | The People Connecting America® and every operating company site through shared components and governance.

Core User Types

	User type	Primary needs	Key website capabilities

1	Entry-level field candidate (locator, laborer trainee)	Find a nearby job with no experience required, see pay up front, apply quickly from a phone	Guided "Where do I fit" flow, location-first job search, pay-forward job cards, mobile apply hand-off, Paradox chatbot
2	Skilled-trade / foreman candidate (splicer, aerial, underground, CDL)	Find roles by trade and operating company, see advancement and per-diem/travel details	Trade-based job categories, operating company filter, career-path content, travel and schedule attributes
3	Engineering / OSP design candidate	Find technical and remote-eligible roles, understand tools and work model	Career area pages, remote/hybrid filter, job detail standard fields
4	Project / operations professional	Understand scale, travel model, and growth trajectory	Why Dycom content, traveling-role explanations, job search
5	Corporate / technology professional (HQ)	Understand Dycom as a growing, tech-enabled company; find HQ roles	Corporate career area, Why Dycom, segment and growth content
6	Student / early-career candidate	Find internships and training programs	Students & Early Careers page, program content, filtered search
7	Veteran / career-transition candidate	Translate military experience to Dycom roles	Veterans page (net-new), self-selected background routing, job alerts
8	Current employee	Find benefits, handbook, safety resources, and internal opportunities	Benefits, Handbook and Hazard Recognition documents, career paths
9	Customer / prospect (carriers, hyperscalers, utilities, government)	Validate capabilities, footprint, safety record, and the right local operating company	Services pages, Our Companies and interactive network map, Safety, Contact forms
10	Investor / analyst	Access news, filings, events, and governance information	Investor news feed (Notified), link to IR microsite, corporate facts

11	Supplier / subcontractor	Access purchase terms and subcontractor information	Fleet and Inventory Terms of Purchase, subcontractor content and request form
12	Community member / resident	Understand local work notices and how to contact Dycom	Community notice content, Contact
13	Content author / OpCo administrator (internal)	Publish and govern content quickly and safely, only within their own site	SitecoreAI page builder, workflow, limited-rights roles, shared components
