Dycom Corporate Website

Brand Credibility & Customer Confidence (B2B / Corporate) Ready for Review

Homepage, Global Navigation & Site Alerts Ready for Review

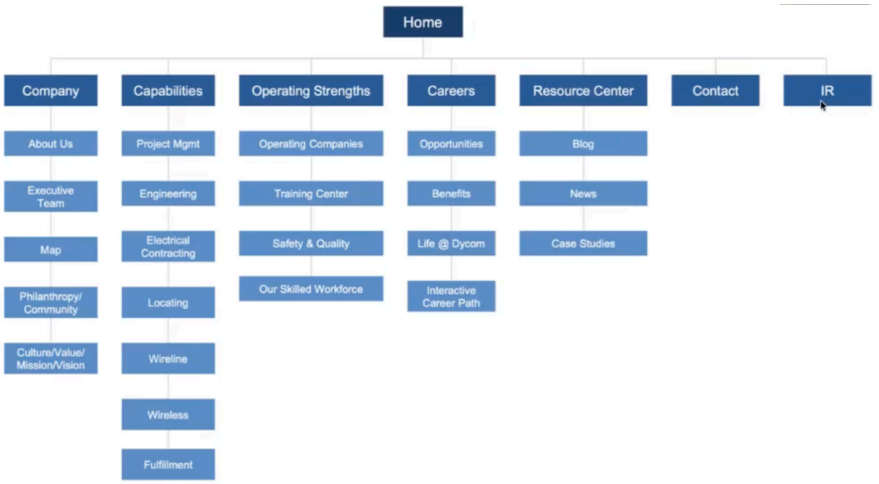

The homepage serves a broad audience — candidates, customers, investors, and employees — and today repeats the same corporate messaging across many pages. The new homepage routes each audience quickly to its task (find a job, explore services, find a company near me, investor news) while telling Dycom's scale and growth story once, consistently, using shared CMS-managed facts.

Legends

1. Priority MVP | Post MVP
2. Status Ready for Review | Approved | Need Discussion

System Shall Requirements

ID	Requirement	Priority	Status
NAV0001	The system should display a global header with the Dycom logo and primary navigation: 1. Companies 2. Services 3. Operating strengths 4. Careers 5. Resource Center 6. Contact 7. Investors 8. Persistent "Search Jobs" call to action	MVP	Approved

			
NAV0002	The system should allow the marketing team to manage navigation labels, order, links, and mega-menu content in the CMS.	MVP	Approved
NAV0003	The system should display a full-screen, keyboard- and screen-reader-accessible navigation drawer on mobile.	MVP	Approved
NAV0004	The system should display a hero component (image, video, or carousel/hero slider) with headline and up to two CTAs, managed in the CMS.	MVP	Ready for Review
NAV0005	The system should display audience pathways on the homepage (for example): 1. Find a career 2. Explore our services 3. Find a company near you 4. Investor news	MVP	Approved
NAV0006	The system should display company facts (for example, employees, operating companies, field offices) from a single CMS-managed "Company Facts" source reused on every page that shows them, so values never conflict.	MVP	Approved
NAV0007	The system should display a global footer with links such as corporate links, legal links, social links, operating company directory link, and cookie-preferences link, managed in the CMS.	MVP	Approved
NAV0008	The system should provide a site-wide notification/alert banner with severity (informational, warning, critical), start and end dates, dismissibility, and site targeting managed in the CMS.	MVP	Approved

NAV0009	The system should provide a homepage pop-up (modal) with scheduling, frequency capping (for example, once per session), and page targeting managed in the CMS, the ability to accommodate absolute and relative URLs, which closes with the Escape key, and close “X” button, and returns focus correctly.	MVP	Approved
NAV0010	The system should provide site search across pages, documents, and news, separate from job search, with a "Looking for jobs?" link to job search.	MVP	Approved
NAV0011	The system should display a breadcrumb trail on all pages below the homepage. Make it configurable via CMS to switch on and off.	MVP	Approved
NAV0012	The system should display a CMS-managed 404 page with search, popular links, and job search entry.	MVP	Approved

About, Safety & Sustainability Ready for Review

About, Safety, and Sustainability establish trust with every audience. Safety in particular is one of the deepest pages on the site and a differentiator for customers and candidates. These pages are rebuilt with reusable components so shared themes (Safety, People, Our Reach) are authored once and reused rather than re-typed.

System Shall Requirements

ID	Requirement	Priority	Status
ABT0001	The system should provide an About Us page with vision, mission, values, leadership (optional), and company facts, using reusable CMS components.	MVP	Ready for Re...
ABT0002	The system should provide a history/timeline component managed in the CMS.	MVP	Ready for Re...
ABT0003	The system should provide a Safety page with programs, training, hazard recognition, and supplier safety sections using accordions and in-page anchor navigation.	MVP	Ready for Re...
ABT0004	The system should provide a Sustainability page organized by pillars (Safety, People, Environment, Business Practices) with a downloadable sustainability report.	MVP	Ready for Re...

ABT0005	The system should allow shared promotional sections (for example, "Connection with Intention": Safety, People, Our Reach) to be authored once as a shared data source and placed on multiple pages.	MVP	Ready for Re...
ABT0006	The system should provide a business segments section describing Communications and Building Systems.	MVP	Ready for Re...

Services (What We Do) Ready for Review

Customers and prospects evaluate Dycom by service line. The seven service pages share a pattern but vary widely in depth. A single service page template with optional sections creates consistency while allowing deeper services (Wireline, Wireless) to show more.

System Shall Requirements

ID	Requirement	Priority	Status
SVC0001	The system should provide a What We Do landing page listing all the services with descriptions, icons, and links, managed in the CMS.	MVP	Ready for Re...
SVC0002	The system should provide a service page template with sections 1. Introduction 2. Capabilities (descriptions with icons) 3. Media (image/video) 4. Operating companies providing this service 5. Related projects or case studies (optional) 6. Contact CTA 7. Related careers.	MVP	Ready for Re...
SVC0003	The system should display operating companies tagged with the service line on each service page, from the Our Companies data.	MVP	Ready for Re...
SVC0004	The system should display related careers (job category link and live job count) on each service page.	MVP	Ready for Re...
SVC0005	The system should support service lines for Building Systems (for example, data center electrical) when Dycom confirms the taxonomy.	MVP	Need Discus...

Our Companies & Interactive Network Map Ready for Review

"Our Companies" is the only place the operating companies are named today, and it is disconnected from Careers. The new directory and interactive map show every Dycom and operating company location, filterable by operating company, service line, and state, and connect each company to its site, services, and open jobs — serving customers and candidates with the same data.

System Shall Requirements

ID	Requirement	Priority	Status
MAP0001	The system should store each operating company as a structured CMS item with 1. Official name 2. Alternate names/aliases 3. Logo 4. Description 5. Service lines 6. Industries served 7. States/regions served 8. Website URL 9. Office locations (address, coordinates) 10. Careers link 11. Business segment	MVP	Ready for Re...
MAP0002	The system should display an interactive map of all Dycom and operating company locations with clustered markers at lower zoom levels.	MVP	Ready for Re...
MAP0003	The system should allow filtering the map and directory by 1. Operating company 2. Service line 3. State	MVP	Ready for Re...
MAP0004	The system should display a location detail card on marker selection with company name, logo, address, services, website link, and "View jobs" link.	MVP	Ready for Re...

MAP0005	The system should allow visitors to search the map by ZIP code or city and display the nearest locations first.	MVP	Ready for Re...
MAP0006	The system should provide an accessible list view equivalent of the map, and default to list view on mobile with a map toggle.	Post MVP	Ready for Re...
MAP0007	The system should display an Our Companies directory (grid of operating companies) with filter and alphabetical sort, linking to each company's profile or site.	MVP	Ready for Re...
MAP0008	The system should display a list view with a message when the map provider fails to load or is blocked by consent preferences.	MVP	Ready for Re...
MAP0009	The system should allow a map component instance to be pre-filtered to a single operating company for use on operating company sites.	MVP	Ready for Re...

Resource Center & Document Library Ready for Review

Employees, suppliers, and investors rely on documents — the handbook, hazard recognition materials, sustainability report, benefit plan disclosures, and terms of purchase. The resource center provides searchable, tagged, and AI-discoverable articles and documents with or without author attribution, per the RFP.

System Shall Requirements

ID	Requirement	Priority	Status
RES0001	The system should provide a resource center listing articles, news, and documents with a search bar and filters by content type, topic, service line, and operating company.	MVP	Ready for R...
RES0002	The system should support resource items with or without author attribution (author name, title, photo), configurable per item.	MVP	Ready for R...
RES0003	The system should render resource content as semantic HTML with Article structured data and include it in the sitemap and an llms.txt index so it is visible to search engines and LLM-based answer engines.	MVP	Ready for R...
RES0004	The system should provide a document list component showing title, file type, size, and last-updated date, opening PDFs in a new tab.	MVP	Ready for R...

RES0005	The system should serve documents from the DAM with stable URLs so replacing a file version does not break existing links.	MVP	Ready for R...
RES0006	The system should flag PDFs lacking accessibility tagging during upload or in a content report.	MVP	Ready for R...

Contact & Forms Ready for Review

Forms are the main customer, supplier, and community conversion. Current GravityForms are migrated to Sitecore Forms with flexible placement (right, left, top, bottom), consistent validation, and routing that preserves the originating operating company.

System Shall Requirements

ID	Requirement	Priority	Status
FRM0001	The system should provide a Contact page with an inquiry-type selector that changes required fields and routing. for example: 1. Customer / project inquiry 2. Careers question 3. Supplier / subcontractor 4. Investor 5. Community / resident 6. Media 7. Other	MVP	Ready for Rev...
FRM0002	The system should route form notifications to recipients configured in the CMS by inquiry type, operating company, and state.	MVP	Ready for Rev...
FRM0003	The system should record originating site, originating operating company, page URL, and UTM parameters on every form submission.	MVP	Ready for Rev...
FRM0004	The system should migrate existing GravityForms forms and their field definitions to Sitecore Forms.	MVP	Ready for Rev...
FRM0005	The system should support form placement right, left, top, or bottom of accompanying content, selectable in the CMS.	MVP	Ready for Rev...

FRM0006	The system should validate fields inline, preserve entered values on error, and display a CMS-managed success message or redirect to a thank-you page.	MVP	Ready for Rev...
FRM0007	The system should protect forms from spam using an invisible or low-friction bot check that is accessible.	MVP	Ready for Rev...
FRM0008	The system should store submissions in Sitecore with export capability and a CMS-configurable retention period.	MVP	Ready for Rev...
FRM0009	the system should send the email to a designated email address for Dycom and each OpCo when the contact form is filled out through the website, apart from saving the form information in the database .	MVP	Ready for Rev...
FRM0010	The system should push qualified customer inquiries to a CRM or marketing automation platform if Dycom selects one.	Post MVP	Ready for Rev...
FRM0011	The system should provide a Subcontractor Request form capturing company, service line, regions served, and contact details.	MVP	Ready for Rev...
FRM0012	The system should capture analytics events for form start, submission success, and submission error, including form name and inquiry type. INTEGRATION	MVP	Ready for Rev...
